and PLAINS ALL AMERICAN PIPELINE
PRESENT**

- AB 32 Regulations Conference -

June 23, 2009

Port of Long Beach - 6th Floor Board Room

Panelists Biographies

Richard Varenchik – Air Pollution Specialist

California Air Resources Board

Rich Varenchik graduated from Humboldt State University in 1968 with a bachelor's degree in history. He then spent 17 years as a newspaper reporter, photographer and magazine writer. He left journalism and worked for the California State Legislature from 1987 to 1989 and then moved to a public outreach position with the California Department of Toxic Substances Control. He began work at the California Air Resources Board in 1996 and has worked in the ARB's Communications Office and Heavy Duty Diesel Branch. In late 2006 he became the second full-time employee working in the ARB's new Office of Climate Change. He handles most of the Air Resources Board's Climate Change outreach in Southern California.

Sharon Rubalcava – Partner

Alston & Bird LLP

Ms. Rubalcava is a partner in the firm's Los Angeles office. She advises clients planning major industrial development projects on compliance with the California Environmental Quality Act (CEQA) and National Environmental Policy Act (NEPA), with a particular emphasis on facilities with significant air and toxic emissions and water quality issues. She also has been involved in legal actions challenging the sufficiency of CEQA documents such as Environmental Impact Reports (EIRs), as well as the failure of regulatory agencies to prepare such documents. Ms. Rubalcava's projects include major infrastructure projects, power plants, solid waste disposal facilities, petroleum pipelines, gasoline refineries, marine terminals and manufacturing facilities. These projects are often highly controversial and present unusually challenging permitting and compliance issues including environmental justice concerns. She advised the Alameda Corridor Transportation Authority on environmental issues associated with the Alameda Corridor project, one of the largest infrastructure projects in the United States.

Josh Margolis – co-CEO

Cantor CO2e

Mr. Margolis oversees the management of North American emissions and renewable energy markets. Before assuming this role Josh served as Managing Director of Cantor Fitzgerald Brokerage's US environmental credit trading and consulting operations. Since 1985 he has provided emission trading consulting, market development, and trading services for states, regulators, and industries in California, the West, Texas, the Northeast, and in numerous countries throughout the world. He was appointed by the California Energy Commission (CEC) to serve on the California Climate Change Advisory Committee charged with the responsibility of advising the CEC with greenhouse gas mitigation strategies and was appointed by the SCAQMD Board to serve on the SCAQMD 3-year RECLAIM audit Advisory Committee. He assisted the San Joaquin Valley air districts to unify their air pollution control rules and helped industry groups in San Joaquin County, Modesto County, San Diego County, Sacramento County, Massachusetts, Oregon, Canada, and the North Sea to develop emission banking and trading rules and/or understand how a trading program could be used to meet environmental goals. Josh assisted the California Rice Industry Association, Building Industry Association of San Joaquin County, Building Industry Association of Central California, Western Governors Association, the US EPA, and Canada to evaluate emission trading rules and/or participate in relevant rule making processes. He developed a clean air auction mechanism for sources to use to transact a variety of national and local environmental products.

Josh has also provided emissions trading brokerage and consulting services under the employ of AER*X, RMT, and Dames & Moore (now URS Corporation). Josh was included in World Generation Magazine's Class of 2008. He graduated from Duke University with a BA in Public Policy Sciences. Josh can be reached at 415-296-9359.

Glenn Mayer – Principal

E2 ManageTech, Inc.

Glenn Mayer brings over 20 years of environmental management experience with an emphasis on air quality permitting.

As a registered Chemical Engineer in the State of California and a South Coast Air Quality Management District Certified Permitting Professional (CPP), Mr. Mayer has extensive experience in air quality issues in Southern California, particularly in the area of marine vessel permitting. Previous to the Pacific Energy Pier 400 Project, Glenn was lead environmental engineer in the re-permitting effort at BP's Berth T121 in the Port of Long Beach. As an air quality consultant in Southern California, Glenn specializes in assisting industry in understanding air quality requirements, identifying solutions and technology that meet the requirements, and working with agencies, community and

industry to gain consensus on appropriate controls, offsets and operating conditions.
